Network Infrastructure

**Effective management of the network infrastructure is critical to delivering on the promise of connectivity**

> **If you don't know** the ambient temperature inside your cell site, you are sitting on a time-bomb. If it gets too hot your network is going to break.
>
> —*Engineer with a major network operator*

## Modius provides **end-to-end monitoring and managment of edge infrastructure**

### Real-time remote management

### Deep Analytics

### Proactive actions based on predictive modeling

### Clear direction for field teams

> **When the NOC** gets a ticket and fixes the problem, these are like grains of sand. But no one is trying to count the sand on the beach, no one sees the beach.
> —*Senior network engineer*

The Modius OpenData platform enables Modius customers to **manage their entire network infrastructure from one pane of glass** at significantly lower cost than competitive solutions

## Monitor

Monitor edge devices and systems for complete visibility into problems when they occur

## Analytics

Record and visualize equipment and system performance for early detection of dangerous trends and anomalies
