

OpenData® Standard Edition: \$24,000

We've combined four industry-leading modules to help take you from scrambling to understand your infrastructure to being on top of your installation in no time!

1 Remote Monitoring

OpenData Remote Monitoring offers core alarming and data collection capabilities across all power, cooling, networking, and environmental sensor equipment.

2 Analytics Management

The Big Data generated by your remote infrastructure is only useful if it can be easily visualized to provide the information needed to make informed, data-driven management decisions at the operational, tactical and strategic levels. Our Analytics Management module helps you make better decisions based on measured data, not models.

3 Asset Management

OpenData Asset Management Module was designed specifically to address the documentation and management requirements of data center facilities infrastructure and the IT equipment it supports.

4 Power Management

The Power Module helps both IT and Facilities management develop strategies for optimizing and extending power capacity in complex data center environments.

- Monitoring and notifications for up to 100 critical infrastructure devices, examples include: iPDUs and related UPS, CRACs.
- Includes rack power capacity analysis.
- Virtualize individual assets to manage location, space capacities, change-outs, and more.
- Asset management for up to 50 data center racks.
- Instant recommendation of server placement or relocation of existing server through real-time analysis of available data center capacity.
- Power management for power-related critical devices.
- Try out future data center changes and view the impact without changing their live data center model.
- Simulate UPS power failure and determine which servers do not have a redundant power source.

Offer Details

License

Term License on premise
Single site

Coverage

Up to 100 devices/
50 racks

One Time Implementation Services Available

- Training
- Integration
- Configuration
- Project Management
- Dedicated Support

Limitations

- One offer activation per client
- SNMP-connected devices only
- Other protocols (i.e. Modbus and BACnet) can be included with additional service
- Does not include integration into third-party services (i.e. ServiceNow)

OpenData® Standard Edition Essentials: \$10,000

Get into the world of advanced monitoring with our remote monitoring capability!

This offer features our industry-leading remote monitoring module to get your DCIM journey underway.

OpenData Remote Monitoring Module

This module features

Automated monitoring of all infrastructure equipment through direct real-time polling of equipment (both IP-networked and serial)

Centralized alarm management to a single console across multiple mission critical facilities (telecom sites, remote sites, manufacturing operations, data centers, etc.)

Simplified data management via Intelligent alarms capability
